Welcome to the Project Tracker

The Project Tracker is a single place for your team to plan work, assign it to people, watch it move, and deliver it on time — replacing scattered spreadsheets and status e-mails.

Everyone signs in to the **same application**, but what you see is shaped by your **role**. A Developer opens straight onto their personal task board; a Co-ordinator opens onto a team command centre; a Business Developer lands on the sales pipeline. The tool quietly shows each person the screens they need and hides the ones they don't.

WHO THIS MANUAL IS FOR

This guide explains the four working roles — **Lead**, **Co-ordinator**, **Business Developer**, and **Developer** — and walks through every page you'll use day to day. (A fifth role, **Admin**, runs the system behind the scenes; it is referenced where relevant.)

Section 2 · Core concepts

Three simple building blocks sit at the heart of the Tracker. Understanding how they nest together makes everything else obvious.

Client → Project → Task

A client (e.g. a customer company) has one or more projects. Each project holds many tasks. Each task is a single piece of work with an owner, a due date, and a status.

Clients

A client is the organisation the work is for. Clients carry contact details and a list of their projects. Projects are always attached to a client.

Projects

A project is a body of work for a client, with a start date, a target date, an optional hours budget, a health flag (On track Watch At risk), and a **team**. The team is organised into four lanes — **Leads**, **Co-ordinators**, **Developers**, and **Business Developers**.

IMPORTANT — VISIBILITY FOLLOWS THE TEAM ROSTER

You only see a project if you are on its team (in any lane) or you have a task on it. Add someone to a project and it appears in *their* Projects list; remove them and it disappears. Admins see every project.

Tasks

A task is one unit of work. It has a title, description, priority, status, a **Person Responsible** (the person who created/assigned it), one or more **People Accountable** (the assignees actually doing it), a start and target date, an estimate in hours, and — once worked — logged time, remarks, attachments, and dependencies.

RESPONSIBLE VS. ACCOUNTABLE

Person Responsible = who assigned the task (usually a Lead or Co-ordinator). **Person Accountable** = who is doing the work (one or more assignees). This is how the Tracker separates “who owns the outcome” from “who's hands-on.”

SECTION 3

The task lifecycle

Every task moves through five statuses. You change status in one click — by tapping the status pill or using the quick-action buttons on a task card.

STATUS	MEANING	TYPICALLY SET BY
To Do	Planned, not started.	Anyone who owns/works the task
In Progress	Actively being worked. Start a timer here.	The assignee ("Start")
Blocked	Stuck — waiting on something. A reason is captured.	The assignee ("Block")
In review	Work submitted, awaiting a check.	The assignee ("Review")
Done	Finished. May still need sign-off.	The assignee ("Done") — signed off by a Lead/Co-ordinator

To Do → **In Progress** → **In review** → **Done** ✓

...with **Blocked** available from In Progress at any time, and a "Reopen" path back from Done if something was missed.

Priority

Each task carries one of four priorities, shown as a coloured pill and used to sort the busiest lists (My Day, overdue queues):

Critical **High** **Medium** **Low**

The "Important" flag ★

A Co-ordinator or Admin can star a task as **Important**. Important tasks are pinned to the organisation-wide Dashboard so leadership can watch them across every project. Starred cards are tinted yellow wherever they appear.

Time tracking

Assignees track effort with a built-in **timer** on each task: **Start** begins timing, **Stop** pauses it (resume any time — even days later), and **Done** stops the timer and marks the task complete. Logged time rolls up per person per day and feeds the project's "logged vs. budget" hours and the Resources workload view.

Dependencies

A task can be marked "**Blocked by**" another task in the same project. The drawer shows what a task is waiting on, so nothing gets started before its prerequisites are done.

The weekly view

Boards can be filtered by **ISO week** (This week / Last week / Next week / any specific week). Any task that isn't Done automatically **carries forward** week to week until it's finished, so nothing silently falls off the plan. A completed task settles into the week it was actually finished.

Signing in & finding your way around

Signing in

- 1 Open the Tracker in your browser and enter your **e-mail and password** on the login screen.
- 2 Forgot your password? Use **“Forgot password”** to receive a reset link, then set a new one.
- 3 On success you land on **your role's home page** automatically (see the table below).

ROLE	LANDS ON	BECAUSE...
Lead	My Day	Start with what the team needs from you today.
Co-ordinator	My Day	Same team command-centre view.
Business Developer	Projects → Pipeline	Deal flow is the BD's first concern.
Developer	My Tasks	Straight to your personal board.
Admin	Dashboard	Org-wide health at a glance.

The layout

- **Left sidebar** — your navigation. The links shown depend on your role; you only ever see pages you're allowed to use.
- **Top bar** — a **search box** (or press `Ctrl/⌘ + K` for the command palette), a **notifications bell** with an unread count, and your **profile menu** (avatar → Profile, Settings for Admins, Sign out).
- **Main area** — the current page. Only this area scrolls; the sidebar and top bar stay put.
- **On a phone** — the sidebar collapses into a menu button (☰) in the top-left. The app is fully responsive.

THE COMMAND PALETTE

Press `Ctrl/⌘ + K` anywhere to jump to a page, project, or action without hunting through menus. It's the fastest way to move around.

If you hit a page you can't access

The Tracker enforces permissions on the server, not just in the menus. If you try to open a page your role can't use, it gently redirects you to your home page with a short note — nothing breaks.

SESSIONS & SECURITY

Sign-in uses secure server sessions (not tokens stored in the browser), so an Admin can revoke access instantly if needed. Always **Sign out** on shared machines via your profile menu.

SECTION 5

Roles at a glance

The Tracker has five roles. Your **global role** decides your home page and your baseline abilities. Within a single project, the same person can additionally sit in one or more **team lanes** (Lead / Co-ordinator / Developer / BD).

ROLE	IN ONE LINE	HOME	SEES MONEY & AUDIT?
Lead	Owns delivery across their projects; signs off finished work.	My Day	Yes / Yes
Co-ordinator	Plans and chases the day-to-day; the hands-on task editor.	My Day	Yes / Yes
Business Developer	Runs the sales pipeline and kicks off new projects.	Pipeline	Yes / No
Developer	Does the work; updates their own tasks.	My Tasks	No / No
Admin	Runs the system: users, settings, imports, org dashboard.	Dashboard	Yes / Yes

Permissions matrix

✓ = allowed · 🟡 = limited/conditional · ✗ = not available. "Own task" means a task you're assigned to.

ACTION	LEAD	CO-ORD	BD	DEV	ADMIN
See the projects they're on	✓	✓	✓	✓	✓ all
Create a project	✓	✓	✓	✗	✓
Edit project details & manage team roster	✓	✓	✗	✗	✓
Create tasks on a project	✓	✓	🟡*	✗	✓
Edit any task's fields (priority, dates, assignees...)	🟡	✓	✗	✗	✓
Update status / log time on <i>own</i> task	✓	✓	✗	✓	✓
Add remarks & @mention on own task	✓	✓	✗	✓	✓
Star a task "Important"	🟡	✓	✗	✗	✓
Sign off / approve a Done task	✓	✓	✗	✗	✓
Import tasks from a spreadsheet	✗	✓	✗	✗	✓
Export data (CSV/Excel)	✓	✓	✓	✗	✓
See financials (hours, budget)	✓	✓	✓	✗	✓
See project audit / history	✓	✓	✗	✗	✓
Manage the pipeline (deals)	✓	✓	✓	✗	✓
Approve leave requests	✓	✓	✗	✗	✓
Manage users & system settings	✗	✗	✗	✗	✓

* A Business Developer can create tasks on a project they kicked off, but a Lead or Co-ordinator assigns the developers afterwards. 🟡 for Lead on "edit task fields" / star Important": Leads focus on project & roster management and sign-off; hands-on inline task editing is done by Co-ordinators and Admins.

Lead

Owens delivery across their projects · signs off finished work · lands on My Day

A Lead is the senior owner of one or more projects. They think in terms of outcomes and deadlines: are we on track, what's blocked, who needs help, and is finished work actually up to standard before it's called done.

Responsibilities

- Own the health and delivery of their projects end to end.
- Shape the team — add Leads, Co-ordinators, Developers and BDs to a project roster.
- Create tasks and set the plan (dates, budget, description, health).
- **Sign off Done tasks** — the final quality gate before work is truly complete.
- Keep an eye on overdue and blocked work, and unblock people.

What a Lead can do

- See and open every project they're on, with full **financials** (hours vs. budget) and **activity history**.
- Create projects and tasks; edit project details and manage the team roster.
- Approve (or revoke) sign-off on Done tasks across their projects.
- Export project data, review the team on **My Team** and **Resources**, and approve **leave** requests.

What a Lead can't do

- Manage users or change system settings (Admin only).
- Import tasks from a spreadsheet (Co-ordinator/Admin).
- Day-to-day inline editing of task fields is primarily the Co-ordinator's job — Leads steer at the project level and sign off outcomes.

A Lead's navigation

My Day Projects My Tasks My Team Calendar Resources Notifications Leaves

A day in the life

- 1 Open **My Day**: scan today's deliveries, overdue items, blocked tasks, and idle team-mates.
- 2 Jump into a **Project** that's slipping; check the board by week, review history if needed.
- 3 Open any task flagged **Done** and **Approve** it — or send it back with a remark.
- 4 Adjust the roster or dates if the plan needs to change; the team is notified automatically.
- 5 Clear leave approvals on the **Leaves** page.

Co-ordinator

Plans and chases the day-to-day · the hands-on task editor · lands on My Day

The Co-ordinator is the engine room. Where the Lead sets direction, the Co-ordinator makes the week actually happen: assigning work, moving dates, unblocking people, and keeping every board current. They have the fullest hands-on control over tasks of any non-Admin role.

Responsibilities

- Turn plans into assigned, dated, prioritised tasks.
- Balance the team's load; reassign and re-date work as things move.
- Chase overdue and blocked tasks every day.
- Flag the truly critical work as **Important** so it reaches leadership.
- Import existing task lists from spreadsheets when onboarding a project.

What a Co-ordinator can do

- **Full task editing** — priority, dates, estimate, description, assignees, status, dependencies, attachments, and the Important star, on any task in their projects.
- **Bulk actions** on My Day — select several overdue tasks and reassign them or set a new due date in one go.
- Create projects and tasks, manage the team roster, and edit project details.
- **Import tasks** from a spreadsheet into a project.
- Sign off Done tasks, export data, and approve leave.

What a Co-ordinator can't do

- Manage users or system settings (Admin only).

A Co-ordinator's navigation

My Day Projects My Tasks My Team Calendar Resources Notifications Leaves

A day in the life

- 1 Open **My Day** — a team view: due today, overdue, blocked, and who's gone idle.
- 2 Clear the **overdue** block: multi-select stale tasks and bulk-reassign or push their dates.
- 3 Open a project board, add missing tasks, set priorities, assign developers.
- 4 Unblock blocked tasks (chase the dependency or the person).
- 5 Star anything leadership must see as **Important**; review sign-off requests.

Business Developer

Runs the sales pipeline · kicks off new projects · lands on the Pipeline

The Business Developer lives at the front of the funnel. They track prospective deals from first lead to kick-off, manage client relationships, and hand won work over to delivery by creating the project and naming its Lead and Co-ordinator.

Responsibilities

- Manage the **deal pipeline** — move deals through Lead → Quoted → Won → Kicked off.
- Maintain **Clients** — contacts, industry, and their projects.
- **Kick off projects**: create the project, pick the client, and assign the Lead and Co-ordinator who'll run it.

What a Business Developer can do

- See and manage the **Pipeline** (drag deals between stages, add and drop deals).
- Open the **Clients** directory and add new clients.
- Create a project and set its Lead + Co-ordinator (delivery then fills in developers).
- Create tasks on a project they kicked off — a Lead/Co-ordinator assigns the doers.
- See **financials** on projects and export data.

What a Business Developer can't do

- Manage a project's team roster or edit its delivery details.
- Edit task fields, assign developers, or sign off work.
- See project audit history, import tasks, or manage users/settings.

A Business Developer's navigation

Projects Clients Calendar Notifications Leaves

Note: a BD's **Projects** page opens on the **Pipeline** tab by default.

A day in the life

- 1 Open the **Pipeline**; drag a newly-quoted deal into "Quoted," review weighted open value.
- 2 A deal is **Won** → create the **project**, pick the client (or add a new one), and name the Lead + Co-ordinator.
- 3 Update **Clients** with fresh contact details.
- 4 Hand off: delivery staffs the project and starts the tasks.

Developer

Does the work · updates their own tasks · lands on My Tasks

The Developer is the doer. Their world is focused and simple: the tasks assigned to them, what needs attention today, and a one-click way to move each task forward and log the time they spend.

Responsibilities

- Deliver the tasks assigned to them, on time.
- Keep each task's **status** current so the team always knows where things stand.
- **Log time** with the timer, and raise a flag by marking a task **Blocked** when stuck.
- Communicate through **remarks** and **@mentions**.

What a Developer can do

- See **My Tasks** (a personal status board) and browse the projects they're on.
- Update the status of their own tasks, run the **timer**, and mark tasks Done (subject to sign-off).
- Add remarks, @mention colleagues, and self-assign to a task on a project they're on.
- Use the Calendar, Notifications, and request **Leave**.

What a Developer can't do

- Edit task fields they don't own (priority, dates, assignees) or star Important.
- Create or edit projects, manage rosters, or sign off tasks.
- See financial figures (hours/budget), the pipeline, audit history, or export data.

A Developer's navigation

My Tasks Projects Calendar Notifications Leaves

A day in the life

- 1 Open **My Tasks** in **Focus** mode — only what's due, overdue, or in progress.
- 2 Pick the top task, hit **Start** to begin the timer, and move it to In Progress.
- 3 Hit a wall? Click **Block** and note why — your Co-ordinator sees it immediately.
- 4 Finished? Click **Done** (timer stops); it goes for sign-off.
- 5 Reply to **@mentions** and check **My Day**-style updates in Notifications.

Dashboard · My Day · My Tasks

Dashboard (Admin home; leadership overview)

An org-wide health screen. Four clickable stat cards — **Active Tasks**, **Overdue**, **Important** ★, **Done This Week** — filter the table beneath them. A **Project health** list shows every project's owner, progress, and hours. Click any row to open the task or project.

My Day (Lead & Co-ordinator home)

Your team command centre — “what does my team need from me today.” It shows:

- **Stat cards** — Due Today, Overdue, Blocked, and Idle resources (people who haven't posted an update in N days — the threshold is adjustable).
- **Today's deliveries** — tasks due today across your projects.
- **Overdue** and **Blocked** — with **multi-select bulk actions**: tick several tasks and reassign them or set a new due date at once. Overdue can be filtered to a single project.
- **Side panel** — Idle resources, Recent activity, and Quick actions (plan a task, export team tasks, open your own tasks).

REASSIGNMENT IS ROLE-AWARE

When you bulk-reassign, the “Reassign to...” list only offers people in the same role as the task's current owner — a developer's task goes to another developer, and so on.

My Day (Developer view)

For Developers, My Day is personal, not team-wide: **Due Today / Overdue / Important-mine** stat cards, a prioritised “**My Day**” list (overdue first, then by priority), an “**Up Next**” preview, and recent updates on your tasks. (Developers reach this via the app; their sidebar home is My Tasks.)

My Tasks (everyone with tasks)

Your personal board of everything assigned to you, grouped into five columns: To Do In Progress Blocked In review

Done .

- **Focus vs. Show all** — Focus shows only what needs attention now (due, overdue, in progress); Show all reveals your full backlog. Your choice is remembered.
- **Week filter** — narrow to a specific ISO week; unfinished tasks carry forward automatically.
- Update any card in place — no menus needed.

Projects, Pipeline & the Project page

Projects (list)

A grid of the projects you're on (Admins and Co-ordinators see all). Each card shows status, health dot, progress bar, task counts (Total / Open / Overdue), the lead, hours vs. budget (if you can see financials), and the target date. **Search** and filter by status (Active / Discovery / On Hold / Delivered).

Leads, Co-ordinators, BDs and Admins get a **New project** button. Click a card to open the Project page.

Pipeline (a tab on the Projects page)

A drag-and-drop deal board with four stages: **Lead** → **Quoted** → **Won** → **Kicked off**. Each deal shows value, win probability, and expected start; the header sums the **weighted open value**. Those who can manage projects can drag deals between stages, add a **New deal**, or drop one. Business Developers open here by default; Developers don't see the Pipeline.

The Project page

Everything about one project, across up to three tabs.

HEADER & STATS

Status, health, name, client, and — by role — buttons for **Export**, **Edit**, **Import Tasks**, **New task**, and (Admin) **Delete**. Stat tiles: Progress, Hours (if permitted), Tasks, Target.

TAB 1 — TASKS

The project's Kanban board (the five status columns). Filter by **week** and by **All / Open / Overdue**. Create tasks with **New task** (title, description, start column, priority, dates, estimate, and assignees split by Developer / Co-ordinator / Lead).

TAB 2 — DETAILS

Description; the **Team** roster in four lanes (add/remove people — each lane only offers people of the matching role); and Schedule & budget. A client info card sits alongside.

TAB 3 — HISTORY (LEAD / CO-ORDINATOR / ADMIN)

A searchable, date-filterable **audit trail** of every change on the project — who did what, and the before → after values.

IMPORT TASKS

Co-ordinators and Admins can bulk-import a project's tasks from a spreadsheet via **Import Tasks** — ideal when moving an existing project into the Tracker. Dates are read as real dates and placeholder rows are cleaned up on import.

Working a task

Tasks appear as **cards** on every board. Almost everything can be done on the card itself; clicking the title opens the full **drawer**.

Anatomy of a task card

- **Priority pill** (top-left) — click to change (if you may edit).
- **Project pill** — jumps to the project (hidden on a project's own board).
- **Star** ★ (top-right) — the Important flag.
- **Title** — click to open the drawer.
- **Assignee avatars** — click to add/remove people (Developers / Co-ords / Leads tabs).
- **Overdue badge & target date** — the date is click-to-change; overdue cards carry a red left edge.
- **Status pill + quick-action buttons** (Start / Review / Block / Unblock / Reopen) + the **timer** (Start / Stop / Done).

WHO CAN CHANGE WHAT ON A CARD

Assignees can change status and run the timer on their own tasks. **Co-ordinators & Admins** can additionally edit priority, dates, assignees, and the Important star on any task in their projects.

The task drawer

Opening a task reveals the full detail panel:

- **Status & quick actions**, and a **sign-off banner** when Done (see below).
- **Description, Person Responsible, Person Accountable** (assignees).
- **Start / Target dates** and **Estimated hours**.
- **Blocked by** — task dependencies within the project.
- **Attachments** — upload and download files.
- **Time** — the timer, a progress bar vs. estimate, and logged time rolled up per person per day.
- **Remarks** — a comment thread; type @ to mention someone (they're notified).
- **Audit timeline** — every tracked change on the task.

Sign-off (approving Done work)

When a task is marked **Done**, the drawer shows a “**needs sign-off**” banner. A **Lead** on the project, the **Person Responsible**, or a **Co-ordinator/Admin** can click **Approve** — the banner turns green and records who approved it and when. Doers cannot approve their own work; approvals can be **revoked** if needed.

EVERYTHING IS LOGGED

Status changes, reassignments, Important toggles, approvals and more are written to the audit trail with your name and the time — visible in the drawer and on the project History tab.

My Team · Resources · Clients

My Team (Lead & Co-ordinator)

The people across the projects you run. A “Projects you coordinate” strip up top, then a card per team member showing their **open** and **overdue** task counts, role, and e-mail — with a link into Resources for the full picture. Anyone with a project-role or an assigned task counts as your team.

Resources (Lead, Co-ordinator, Admin)

A workforce view of everyone on the team. Summary tiles (Total / On track / Watch / Idle) act as filters; search by name, e-mail or role. Each **resource card** shows:

- **Hours / 5d** and % of weekly capacity used.
- **Open tasks** and how many are overdue.
- **Estimate accuracy** and any performance flags.

Click a card for a **drawer** with contact details, this-week workload with a capacity bar, performance signals, upcoming leave, and the person's full task list (each opens the task).

SIGNALS, NOT VERDICTS

Flags are prompts for a conversation, never automatic action — “surface for a one-on-one.”

Clients (Business Developer & Admin)

The client directory. Each client card shows industry, primary contact and e-mail, how many projects (and how many active), and a linked list of those projects. **Add client** registers a new organisation to attach projects to. Click a client to see its full detail page.

Calendar · Leaves · Notifications · Profile

Calendar

A month grid of tasks by **target date**. Admins and Co-ordinators see all tasks; everyone else sees their own work (assigned to them or where they're responsible). Click a day to see its tasks; click a task to open it. Navigate months with the arrows.

Leaves

Self-service time off, with two views:

- **Everyone** can **Request leave** (type, dates, an optional private note), see their own **leave balance** for the year, their upcoming leaves, and a privacy-safe **team availability** list (names & dates only — reasons stay private).
- **Leads, Co-ordinators & Admins** get the full view: upcoming leave, a **Pending approval** queue with **Approve / Deny**, an all-entries table, and per-person balances. Approved leave counts against the annual quota and is measured in working days.

Notifications

Your inbox of what happened: **assignments, @mentions, status changes, blocks, Important flags, overdue alerts, and leave approved/denied**. Filter by kind, search, mark read, and click through to the task. The top-bar bell shows your unread count from anywhere.

Profile

Your account: update your **name**, change your **password**, and review the notification types relevant to your role. Admins additionally reach **Settings** from the profile menu (SMTP, working hours & days, leave types and quota, users, imports, e-mail log, and the global audit).

NOTIFICATIONS ARE TUNED TO YOUR ROLE

A Developer is told about tasks assigned to them and @mentions; a Lead also gets sign-off requests and a daily overdue digest across their projects; a BD hears about new intake and project status changes.

End-to-end process flows

How the roles hand work to one another, start to finish.

A. From deal to delivery

Business Developer tracks a deal on the Pipeline → drags it to **Won** → **creates the project**, picks the client, and names the **Lead + Co-ordinator**.

→ **Lead / Co-ordinator** open the project, add **Developers** to the roster, and create tasks (title, dates, priority, estimate, assignees).

→ **Developer** picks up a task: **Start** (timer + In Progress) → works → logs time → **Done**.

→ **Lead / Co-ordinator** reviews the Done task and **Approves** the sign-off. Project progress ticks up.

B. Daily delivery loop

Co-ordinator opens **My Day** → clears overdue via bulk reassign/re-date → unblocks blocked tasks → stars critical work **Important**.

→ **Developer** opens **My Tasks** (Focus) → moves each task forward one click at a time → raises a **Block** with a reason when stuck.

→ **Lead** watches health on My Day, signs off finished work, and steps in where a project is slipping.

C. Blocked work

Developer marks a task **Blocked** and states why → it surfaces on the Co-ordinator's My Day and in Notifications → **Co-ordinator** resolves the dependency or reassigns → task returns to **In Progress**.

D. Requesting time off

Anyone opens **Leaves** → **Request leave** (type, dates, optional note) → it enters the **Pending** queue → **Lead / Co-ordinator / Admin** clicks **Approve** or **Deny** → the requester is notified, and approved days count against their quota and show in team availability.

E. Weekly roll-over

At week's end, any task not yet **Done** automatically **carries forward** into the next week's board — nothing is lost. A task marked Done settles into the week it was actually completed.

Quick reference & glossary

One-click status moves on a card

FROM	BUTTON	GOES TO
To Do	Start	In Progress
In Progress	Review	In review
In Progress	Block	Blocked (with reason)
Blocked	Unblock	In Progress
Done	Reopen	In Progress
any	Done (timer)	Done + stops timer

Handy shortcuts

- `Ctrl/⌘ + K` — open the command palette (jump anywhere).
- Click a **status** or **priority** pill to change it in place.
- Click a **date** to open the picker; click **avatars** to change assignees.
- Type `@` in a remark to mention (and notify) a colleague.

Glossary

TERM	MEANING
Person Responsible	Who assigned/owns the task (usually a Lead or Co-ordinator).
Person Accountable	Who is doing the work — the assignee(s).
Important ★	A flag that pins a task to the org-wide Dashboard.
Sign-off / Approve	The quality gate confirming Done work is truly complete.
Health	Project status signal: green (on track), yellow (watch), red (at risk).
Pipeline	The sales deal board: Lead → Quoted → Won → Kicked off.
Idle resource	A team member who hasn't posted an update in N+ days.
Carry-forward	Unfinished tasks automatically roll into the next week.
Focus mode	My Tasks filter showing only due/overdue/in-progress work.
Weighted open value	Pipeline value × win probability, summed across open deals.

NEED HELP?

If a page or button isn't where you expect, it's almost always because your **role** doesn't include it — check the permissions matrix in Section 5, or ask your Admin to review your role and project assignments.
